Ques1

- Create a directory in D drive (input the name from user)
- Create an empty text file in that directory
- Write few lines to the file
- Count the number of words in the file and print the count on console.
- Create another text file in the same directory
- Copy contents of first file to second file in reverse order (first line of first file should be last line of second file, second line of first file should be second last line of second file and so on)
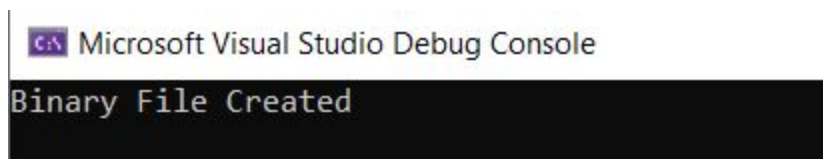

Solution :

Console Application Attached : FileIo

2. Write a program to extract (only) the alphabetic characters contained in a binary file, and copy them to a different file. The extracted characters must be those whose ASCII code is 32 to 127, or 10, or 13.

Solution: File Attached : ASCII_Characters
